

HB 990 -- MISSOURI VIDEO LOTTERY CONTROL ACT

SPONSOR: Korman

This bill allows for and establishes a regulatory framework for the use of player-activated video terminals for the conduct of lottery games. Under this bill the video lottery game operators and the video lottery game retailer will split 65% of the adjusted gross receipts of any game and pay the remaining 35% of the adjusted gross receipts to the state. The state is then required to pass 5% of the adjusted gross receipts on the political subdivision in which the game is located. The bill prohibits the lottery commission from allowing a single video lottery game operator to control or operate more than 25% of the terminals in the state.
